

Latest Release of the Contigo System

The latest release of the Contigo system was completed **Friday, December 19, 2008.**

Please see below for a brief description of the enhancements included in this release.

Benefit	Description
Stop Report with Map – Multi-Driver^{Beta}	Optimize route planning and spot unnecessary driver “overlap” with the additional Stop Report with Map – Multi Driver. This new beta map allows you to display numbered and sequenced stop points for up to 3 drivers on a single map, with up to 1000 points supported. Navigate quickly through many days of data. View or hide each driver's map points, stop summary, and tabular view of data.
	
Idle Report – Summary by Driver	In addition to the overall report summary for all drivers, each driver's stop count and total idle time is now summarized on the updated Idle Report,
Trip Details Report – Color-coded	Stop durations are now color-coded on the Trip Details Report using the same scheme as the Stop Report, providing a fast and intuitive way to spot route inefficiencies or unexpected delays.
Inputs available from API	Auxiliary Input data is now available through the Contigo DEX application programming interface. The API documentation will be updated on the Partner Resource Centre to reflect this change.
