Latest Release of the Contigo System

The latest release of the Contigo System will be completed on Thursday April 6, 2017. Please see below for a brief description of the enhancements included in this release.

Feature	Description
Contigo ELD Solution	On December 16, 2015, the U.S. Department of Transportation approved the final ruling for the use of Electronic Logging Devices (ELDs) for driver Hours of Service (HOS) and Driver-Vehicle Inspection Report (DVIR) logging. These new regulations come into effect on December 18, 2017. Contigo is pleased to introduce our fully compliant ELD solution, combining the comprehensive fleet management capabilities of the **Contigo 6601** device with the **e-Track Certified** logging app from ATS Fleet Management Solutions. The Contigo 6601 plugs directly into the vehicle's diagnostic port, gathering the required data for ELD compliance directly from the ECM. This data is transmitted in-cab to the ELD display device via Bluetooth. For more information about the ELD solution, please contact Contigo.

Feature	Description
System Infrastructure Enhancements	With this launch we are introducing a number of system infrastructure updates that will improve the overall efficiency and reliability of the Contigo customer portal, beacon communications and data access.

In addition to the features above, this release will also include other minor bug fixes and enhancements.

If you have any questions or comments, please do not hesitate to contact us at support@contigo.com.

Best regards,
The Contigo Team

The right connection.™
