Latest Release of the Contigo System

The latest release of the Contigo System will be completed on Thursday June 18, 2020. Please see below for a brief description of the enhancements included in this release.

Feature	Description
Administration Menu Improvements	Previously, we added a searchable grid to the "beacons" menu in the administration tab in the portal. This grid has now been added to the other menus, including Scenarios, Landmarks and Users, to make navigation of long lists of items much easier when performing administration tasks in the portal.
6800 4G LTE OBDII Beacon (BETA)	We have recently added a new 4G LTE beacon to our family of plug-and-play devices. The 6800 supports all of the features of our other OBDII beacons. Please let us know if you are interested in trying out this device as part of the beta test.
Audio Feedback for Posted Speeds	For beacons with audio buzzers installed, the Posted Speed scenario may now be configured to warn drivers with a short beep when they exceed a posted speed limit.

Feature	Description
System Enhancements	This release includes system and infrastructure enhancements that will improve security and reliability.

In addition to the features above, this release will also include other minor bug fixes and enhancements.

If you have any questions or comments, please do not hesitate to contact us at support.telematics@vecima.com.

Best regards,

The Contigo Team
